Chemical Dose Planner

What this site's calculators say to add, logged before and after

Pool name _____ **Volume (gallons)** _____

This sheet does not set a dose on its own. Run the number through the matching calculator on this site (chlorine, shock, salt, pH/alkalinity), write down what it says, add it, then log the reading after. Never mix chemicals, always add the chemical to the water, run the pump while dosing, and retest before adding anything else. Follow the product label for anything this site's calculators do not cover.

Dosing rules, every time

- [ ] One product at a time; never mix two chemicals, or a chlorine product with acid
- [ ] Chemical added to water, never water poured into the chemical
- [ ] Pump running while dosing and for at least a full cycle after
- [ ] Retested before adding anything else
- [ ] Dose taken from this site's calculator or the product label, never guessed

Dose log

Date	Product added	Calculator used	Amount (from calculator/label)	Reading before	Reading after

Which calculator for which job

poolcarecalculator.com/calculators/chlorine-calculator for a free-chlorine dose, /calculators/shock-calculator for a shock treatment, /calculators/salt-calculator for a salt-system fill or top-up, and /calculators/ph-alkalinity-calculator for pH and total alkalinity. Every one of them is built to be reused for every single dose, not just your first one.

Sanitizer and salt system

Current prices and our latest picks: poolcarecalculator.com/kit/pool-care-planner/gear/.

- **3 Inch Stabilized Chlorine Tablets, 5 lb**: A small pack of slow-dissolving trichlor tablets for a floater or skimmer on a starter pool.
- **AquaRite Salt Generator, up to 25,000 Gal**: The benchmark salt system that makes its own chlorine from dissolved salt, ending the weekly tablet routine.
